### Recess/Inside Fit

Recess/Inside Fit means that the blind will be installed inside the architrave. Recess or In Fit Blinds are front (Over Roll) facing and roll forward. This method hides the tube or fabric on the roll and this is particularly useful when you select a fabric with a white or different colour back. This fitting method will also assist the tube and fabric from touching things like; window winders, handles, door knobs or any item that may interfere or obstruct the blinds operation.

### Face/Outside Fit

Face/Outside Fit means that the blind will be installed on the outside of the architrave. Face or Out Fit Blinds are back (Under Roll) facing and roll backwards. This method provides a tight fit of the fabric to the frame or architrave to provide privacy, light and heat control.
